SERIES 9000
AIRBRAKE FITTINGS

SOLUTIONS FOR THE TRANSPORTATION SECTOR

Being one of our three strategic business sectors, Camozzi Automation offers the **Transportation** industries a wide range of products. These products are ready for use and their robust construction means they are able to operate in the harshest conditions, thus assuring reliable and efficient operation in order to keep you moving.

In close cooperation with our customers and partners, we develop and deliver both standard products and customised solutions, which all offer **high performance**, smart and effective designs and **excellent quality**.

Developing products that can operate in extreme temperatures, dirty or corrosive environments and while exposed to high mechanical loads and/or vibrational stress is **the mission** that drives our experienced and motivated engineers.

Our worldwide customer base consists of leading OEMs, Tier 1 System Suppliers, Component Suppliers and well-known businesses in the Aftermarket & Repair sector.

We always follow one principle:
"Customer first - always".

A **remarkable level of design** and production know-how, combined with an enterprising spirit and a commitment to **listen to customers**, are our keys to success in the transportation sector.

Camozzi Automation's long service to the transportation sector means it supplies equipment and expertise on many different types of vehicles, including **On-Road, Off-Highway** and **Rail**.

We are active in all the **major application areas**, including Chassis, Cabin & Body, Mobile Automation and the Powertrain.

Our offering starts from fittings for multiple fluids like air, fuel, water, oil or grease, and extends over a wide range of gas and fluid control valves to pneumatic and electric actuators, FRL units and other complementary components. This comprehensive range means we are always **the right partner for your project**.

Connection or Actuation, On/Off or Proportional, Mechanical or CAN-Bus, IATF 16949 or IRIS, **we talk and understand your language**.

**TRUCK
& TRAILER**

**BUS
& COACH**

Series 9000 Airbrake Fittings

Series 9000 fittings have been designed to connect DIN 74324 or ISO 7628 tubing in the pneumatic brake systems of commercial vehicles. They offer excellent reliability and ease of assembly and the range includes a special release tool for disconnecting tubes from the fittings.

Each fitting has a rubber cap for the protection of the internal parts against dirt and water ingress.

Because of the very compact design, Series 9000 fittings are the best choice for difficult or space-constrained situations.

Similarly, the release tool also requires only a minimum amount of space for use.

Series 9000 fittings are TÜV certified and produced according to IATF 16949: 2016 standards.

General data

Thread type	Metric acc. ISO965 / Conical NPTF acc. ANSI B1.20.3	Materials	COMPONENT	MATERIAL
Media	Compressed air (other fluids, please contact our technicians)		1 = Body	Brass
Operating pressure	Up to 16 bar (review also tube specifications)		2 = Support Tube	Composite
Operating temperature	-50°C up to 100°C (review also tube specifications)		3 = Tube O-Ring	NBR
Tubes	Designed for use with Hytrel® or polyamide tubing, compliant with standards DIN 73378, DIN 74324 or ISO 7628		4 = Collet	Brass
			5 = Dirt Seal	NBR
			6 = Thread O-Ring	NBR
			7 = Locking Nut	Brass
			8 = Swivel Body	Brass
			9 = Swivel O-Ring	NBR
			10 = Seeger Ring	Stainless Steel
			11 = Protection Cap	Biodegradable Composite

Straight connector

Shaped connectors (fixed/swivel)

Swivel stud

Assembly and removal of the tube

To guarantee correct, safe and tight connection, it is necessary to cut the tube in the correct way (Picture A).

The cutting angle should not exceed 5°, thus we recommend using a tube cutting tool, such as the model PNZ shown at the end of this catalogue.

The outer surface of the tube needs to be smooth and free from any kind of damage or dirt (Picture B).

When inserting the tube, make sure to push it into the fitting down to the tube stop (Picture C).

The correct insertion length is specified for every tube size/fitting and can be found in the table to the right (Assembly length H). We recommend marking the insertion depth on the tube with a pen or tape before assembling in order to visually ensure proper insertion.

Tube	Outer diameter (mm)	Inner diameter (mm)	Assembly length H (mm)
4x1	4	2	18,5
6x1	6	4	17,5
8x1	8	6	19,5
10x1	10	8	21
10x1,5	10	7	21
12x1,5	12	9	21,5
15x1,5	15	12	25
15x2	15	11	25
16x1,5	16	13	27,5
16x2	16	12	27,5
18x2	18	14	27,5

To remove the tube from the fitting, use the Series 9000 DRK release tool at the end of this catalogue. Hook it onto the tube and press the protection cap down to release the tube so that you can pull it out of the fitting.

Attention: Do not try to remove the tube from the fitting when the system is still pressurised. Make sure you have released all the air pressure before you remove the tube.

Tube assembly and disassembly must be carried out by a technician who is trained and has detailed knowledge of the air brake system and the Series 9000 fittings.

Please ensure mounting torques for straight connectors, straight studs and the fixation nuts of shaped connectors meet the values shown in the table on the right.

Thread	Torque force (Nm)
M10X1	11 - 15
M12X1.5	15 - 22
M14X1.5	19 - 23
M16X1.5	24 - 33
M18X1.5	27 - 33
M22X1.5	36 - 44

Assembly of shaped Non-Swivel Connectors

To ensure a tight and secure connection between the fitting and the threaded port of the component in the pneumatic system, please install following this procedure:

1. Screw the nut upwards until you reach the mechanical stop (do not tighten the nut against the stop with a tool, simply position the nut by hand, as shown in the picture).

2. Screw the fitting into the threaded port until the O-ring seal touches the surface of the port. This can be done by hand or using a tool. We recommend you do this by hand (Picture A) to maintain feel and identify once the correct position is reached.

3. Bring the fitting into the final, desired position rotating it by a maximum of 180° clockwise or anti-clockwise.

4. Fix the position you have defined for your fitting with one hand and tighten the connection by screwing the nut downwards until you have reached the recommended torque (see table on the previous page).

5. The assembly is now complete.

Assembly of Swivel Connectors

For Swivel Connectors, please install manually according to the following instructions. **Attention:** Swivel connectors should not be used in applications with relative movement (e.g. connections between truck & trailer or between axle and chassis).

1. Mount the stud onto the port (please refer to the maximum torque forces on the previous pages). We recommend removing the cap immediately before you mount the female part to the stud in order to prevent dirt on or damage to the O-rings.

2. Position the female part on the stud. If you want to use an anti-rotation lock, attach this to the female part before you connect to the stud.

3. Now press down the upper part completely. The assembly is now complete.

Note: This connection cannot be disassembled again.

4. The swivel connector is now completed and ready for the tube to be inserted. The connector can be rotated to the necessary position (360° swivelling). If you have added a rotation lock and the connector is still swivelling, this is because you have not yet engaged the lock.

5. To engage the rotation lock, bring the upper part to a position that lets you press it down to interlock with the hexagon of the stud. Then press the locking ring down. The connector is now fixed in position.

Attention: The lock is a positioning support for line routing. It is not meant to withstand excessive bending forces

DRK 18	18	40	12	31	5	10

■ Tube cutter tool Mod. PNZ and PNZP

CHARACTERISTICS	
Mod.	
PNZ-12	able to cut tubes with Ø up to 12 mm
PNZ-25	able to cut tubes with Ø up to 25 mm
PNZP-12	able to cut tubes with Ø up to 12 mm

Assortment boxes / Repair Kits

For the pneumatic system of commercial vehicles and trailers.

Air brake & Airsuspension > Series 9000 Accessories > Series 6000

The TRUCK-DCASE kits enable drivers to repair tube damages or other smaller issues on the connections when being out on the road or in the field and professional repair/ maintenance is out of reach.

These repair kits contain fittings in the most common sizes, the necessary release tools, as well as a tube cutting device.

The TRUCK-DCASE also contains concise user instructions.

MODEL TRUCK-DCASE/6000

Repair kit with Series 6000 fittings

The kit is supplied with:

2x 6580 4	2x 6580 10	1x PNZP-12
2x 6580 5	1x 6580 12	
2x 6580 6	1x 6580 14	
2x 6580 8		

NOTE: the 6000 fittings are only for use in auxiliary applications (no airbrake, no suspension, no powertrain).

MODEL TRUCK-DCASE/9000

Repair kit with Series 9000 fittings

The kit is supplied with:

2x 9580 6	1x DRK 6	1x PNZP-12
2x 9580 8	1x DRK 8	
2x 9580 10	1x DRK 10	
2x 9580 12	1x DRK 12	

MODEL TRUCK-DCASE/9000+6000

Repair kit with Series 9000 and Series 6000 fittings

The kit is supplied with:

1x 6580 4	2x 6580 10	2x 9580 6	1x DRK 6
1x 6580 5	1x 6580 12	2x 9580 8	1x DRK 8
1x 6580 6	1x 6580 14	1x 9580 10	1x DRK 10
1x 6580 8		1x 9580 12	1x DRK 12
			1x PNZP-12

NOTE: the 6000 fittings are only for use in auxiliary applications (no airbrake, no suspension, no powertrain).

Fitting Series:

- **Series 1000**
Brass universal nose fittings
- **Series 2000**
Brass adaptors
- **Series 5000**
Quick release couplings
- **Series 6000**
Single seal brass super-rapid fittings
- **Series 6000 HP**
Single seal brass super-rapid fittings for lubrication
- **Series 7000**
Single seal composite super-rapid fittings
- **Series 8000/H8000**
Dual seal brass super-rapid fittings
- **Series 9000**
Dual seal brass airbrake fittings
(metric/collet design)
- **Series ND**
Single seal brass airbrake fittings
(Inch/collet design)
